--	--

Professional Profile

I am a Software Engineer with over three years' experience in building and deploying full-stack applications in production environments. Proficient in Java, Spring Boot, Angular and DevOps practices. I am rigorous and autonomous, and I am comfortable working in structured teams on high-impact projects. I am seeking a challenging role where technical excellence and quality are valued.

TECHNICAL SKILLS	
Scripting language	Python
Programming language	Java – JavaScript – Html - Angular – CSS - ReactJs
Databases	MySQL – PostgreSQL - SqlLite
DEVOPS tools	GitHub - jenkins – docker – Git -Gitlab
Test tools	Cucumber - Selenium - Appium - JMeter
Software Architecture	MVC, REST architecture, microservices concepts
Desktop applications	Electron.js, offline applications with synchronization
Backend development	Spring Boot (REST API, security, JWT), PHP

*

Professional Experience		
Year	Enterprise	Position
February 2023 – Present	Synapsys (Permanent contract)	SOFTWARE ENGINEER
- Developed an employee audit management system covering organizational structure, org chart, staff management, and supervisor tracking — integrated with an Android mobile application for authentication — Stack: Spring Boot, Angular, Android. - Developed a tourist tax collection platform using JHipster, Angular, Spring Boot and PostgreSQL, which streamlined the collection process for local authorities. - Performed corrective maintenance on a national health coverage system (SEN-CSU), ensuring continuity of service for insured individuals and health organizations — Stack: Angular, Spring Boot, MySQL. - Built an offline desktop application for health coverage management with automatic online data synchronization — Stack: Electron.js, SqlLite - Designed and developed an access control management system for a corporate client — stack: PHP and Angular. - Delivered a multi-platform enrolment tracking application (web and desktop) with SYLAB, covering data visualisation, user management and enrolment configuration. Stack: Spring Boot, Angular and MySQL.		
September 2022 – January 2023	B&G Digital (Permanent contract)	Front-End Developer Software Engineer

Mission : • Write automated test algorithms and generate a QA test report • Front-end development of a tourism management application (hotel, restaurant, discovery, event) • Manual tests, performance tests		
Mar 2022 - Aug 2022	B&G Digital (Internship)	Software Test Engineer Devops
Missions : • Write automated test algorithms and generate aQA test report • Create a delivery pipeline including automated tests and send the test report to the developers • Automate the CI/CD using Jenkins		

Academic & Personal Projects	
Personal Project – Multi-Warehouse Management Platform (SmartWarehouse)	• Digital platform composed of a web application, a mobile application, and an integrated marketplace. The platform provides real-time visibility into warehouse activities (stock management, invoicing, sales, activity logs, etc.) and integrates artificial intelligence features to predict stock shortages, optimize inventory levels, and forecast sales. • Type: Web application, mobile application, and marketplace • Technologies: Spring Boot, Angular, MySQL, Flutter, AWS EC2, Docker • Role: Design, development, and deployment
Flexifit – Platform for Booking Services	• Web application allowing customers to book services (hairdressing, beauty treatments, massage, etc.) from partner service providers. Service providers have a dashboard to manage their availability, services, bookings, and income. • Type: Web application, mobile application • Technologies: Spring Boot, Angular, MySQL, Flutter, AWS EC2, Docker • Role: Design, development, and deployment •
Master's Thesis	• Topic: Software Quality Management • Objective: Automation of testing and improvement of the software delivery quality process • Technologies: Java, Selenium, Cucumber, Jenkins, JMeter • Results: Implementation of automated tests (functional and performance testing) and a fully operational CI/CD pipeline

EDUCATION & TRAINING		
Year	School	Document
2023	ETL using python: from MySQL to big query (Udemy)	Training Certificate
2024	LPI Linux Essentials (010-160) Complete Course and Exams	Training Certificate
2023	Google Analytics for Beginners (google analytic academy)	Training Certificate

2024	Complete Agile Scrum Master Certification Training (Udemy)	Training Certificate
2022	Huawei HCIA Cloud Computing (HUAWEI)	Score : 71%
DEGREES		
2022	Ecole supérieur polytechnique de Dakar (ESP)	Master in software engineering and information systems
2018	Institut supérieur d’informatique (ISI)	Bachelor degree in software engineering
2017	Institut supérieur d’informatique (ISI)	Advanced Technician's Certificate in Management Information Systems
2015	Lycée Abdoulaye SADJI	Scientific Baccalaureate

LANGUAGES	
French	Read, written, and spoken fluently
English	Good written, read and spoken comprehension, professionally proficient
Wolof	Native language

Additional Skills
Known for rigor, strong sense of responsibility, and the ability to manage priorities effectively under pressure. A good listener, responsive, and comfortable collaborating within multidisciplinary teams. Keeps up with technology trends through regular monitoring. On the technical side, experienced in IT support and application maintenance, analysis and design of complex platforms, application deployment, and security best practices. Skilled in database modeling (MERISE, UML), advanced SQL, cloud fundamentals (AWS, Google Cloud), and technical documentation writing (LaTeX).
